

Fact Sheet

Facial red Veins

Many people suffer from red veins on the face, which appear unsightly and distressing.

Normally found on the cheeks and nose Lasercare can treat these veins and have had great success in improving the condition for many patients.

To find out more about laser red vein removal please feel free to download our informative fact sheet or call 0800 028 7222 to speak to one of patient advisers.

Does it hurt?

The treatment can sting and is best likened to an elastic band flicking against the skin. There are topical anaesthetics that can be used to help with the sensation.

How many treatments are required?

Normally the patient can expect 2 – 3 treatments for the condition or more depending on severity.

Are there any side effects?

Post treatment there may be some bruising which will subside within a couple of days.
